

**CHANGE IN DECISION**Site Name: Clinton Engines, MaquoketaProject Manager: Tami RiceDate: May 2, 2008**Previous Decision:**

Due to the elevated concentrations of toluene near the former Tank 1 area and the uncertainty with other samples collected, particularly chlorinated solvents, an ESS investigation needs to be conducted at the site under CERCLA. Toluene free product appears to exist onsite.

**New Decision & Justification:**

The site has been voluntarily enrolled in the Land Recycling Program (LRP). Therefore additional follow up will be conducted through the LRP under 567 Iowa Administrative Code (I.A.C.) Chapter 137 instead of conducting an ESS under CERCLA.
